UPDATES ON CIALIS

Q: What is Levitra (Vardenafil)?

Levitra (Vardenafil) belongs to a group of medicines called “PDE5 inhibitors”. It is a round shaped orange tablet, which is swallowed and available in three strengths - 5mg, 10mg and 20mg. Levitra (Vardenafil) is argued to work faster than Viagra (within 15 minutes) and be more likely to work first time.

Q: How does Levitra (Vardenafil) work?

Levitra (Vardenafil) inhibits an enzyme called phosphodiesterase type 5 (PDE-5) which means the smooth muscle in the penis is more likely to relax and allow blood to flow in, causing an erection. For Levitra (Vardenafil) to be effective, sexual stimulation is required and so Levitra (Vardenafil) will not create an erection unless a man engages in sexually exciting activity.

Q: How long does it take for Levitra (Vardenafil) to work?

The amount of time Levitra (Vardenafil) takes to work varies from person to person, but on average it takes between 25 minutes to one hour although some men will achieve an erection within 15 minutes.

Within a 5 hour period after taking the tablet an erection should occur in response to sexual stimulation. The action of Levitra is not generally affected by eating before taking the treatment (except where the meal has a high fat content) or by drinking alcohol, so men can eat or drink as they would normally before taking Levitra.

s

Q: Does Levitra (Vardenafil) always work?

Levitra (Vardenafil) may be able to help men with erection problems to get and keep an effective erection. It may provide improvements in both erection hardness and the ability to maintain your erection during sex.

In major clinical trials concerning men with erection problems, Levitra (Vardenafil) improved the quality of erections for the majority of men. A lot of men who took Levitra (Vardenafil) were satisfied the first time they tried it.

Q: What are the side effects associated with Levitra (Vardenafil)?

When taken at the recommended dose, the possible side effects of Levitra (Vardenafil) are usually mild and pass with time. The most common side effects are a headache and facial flushing.

Q: Who should not take Levitra (Vardenafil)?

Levitra (vardenafil) is only for men and should only be taken if your doctor has prescribed it for you. This is because Levitra (Vardenafil) can be dangerous if you take it at the same time as certain other medicines including some that are used to treat chest pain (angina). Also men aged over 75 years and taking ritonavir, indinavir, ketoconazole or itraconazole (oral form) should not take Levitra (Vardenafil).

In addition, men with cardiac disease of a severity where sex is inadvisable, unstable angina or angina occurring during sexual intercourse, low blood pressure or men who have had a recent stroke or heart attack should not take Levitra.

Q: How do I get Levitra (Vardenafil)?

You must complete the **Maxpharm** online medical declaration and our doctor will prescribe Viagra if he feels it is the right treatment for your symptoms. Our pharmacy will dispense your medication and it will be delivered to your door.

UPDATES ON ERECTILE DYSFUNCTION

How MAXPHARM.COM can help you with Erectile Dysfunction

Between the ages of 18-65, all males will suffer from “sporadic”, “regular” or “chronic” Erectile Dysfunction. Almost all Erectile Dysfunction and Impotence issues can be resolved by a new generation of drugs like Cialis (Tadalafil), Viagra (Sildenafil) and Levitra (Vardenafil), prescribed as part of a correctly screened and dispensed medical solution.

DRM HEALTHCARE Online Dispensary

Maxpharm does prescribe erectile dysfunction drugs and our pharmacy dispatches them within 24 hours. But for your own protection, everyone applying online must be screened by our doctors. This is a quick, confidential process but it can allow for the delivery of your medication within 24 hours. There are several treatments available. Read below to find out which one may be suitable for you.

Q: What treatments are there for erection problems (Erectile Dysfunction)?

Since there are many possible causes of erection problems, treatments can vary a great deal.

Sexual therapy can be of great help for men with erection problems with a predominantly psychological cause. Often medicines are used in association with such therapy.

If a physical cause is the main problem, such as a hormonal imbalance addressing this can remove the erection problems. In some cases surgery can ensure normal blood flow is restored. Treatment of depression can remove erection problems caused by this.

In many cases medicines will be prescribed by a patient’s doctor to directly assist the body to create and maintain a good erection. These medicines can either be injected into the penis (E.g. Caverject (alprostadil), inserted into the eye of the penis (E.g. MUSE (alprostadil)) or taken as a tablet by mouth (E.g. **Viagra** (Sildenafil), **Cialis** (Tadalafil) And Levitra

UPDATES ON LEVITRA

Q: What is Levitra (Vardenafil)?

Levitra (Vardenafil) belongs to a group of medicines called “PDE5 inhibitors”. It is a round shaped orange tablet, which is swallowed and available in three strengths - 5mg, 10mg and 20mg. UPDATE ON VIAGRA

Q: How does Viagra (Sildenafil) work?

Viagra (Sildenafil) belongs to a group of medicines called “PDE5 inhibitors”. It is a blue oral tablet, which is swallowed available in three strengths - 25mg, 50mg and 100mg. For Viagra to be effective, sexual stimulation is required and so Viagra will not create an erection unless a man engages in sexually exciting activity.

Viagra (Sildenafil) works by helping the blood vessels to the penis let more blood flow. This helps to create and keep an erection. This increased blood flow is achieved by relaxing the smooth muscles that supply blood to the penis.

Q: How long does it take for Viagra to work?

The amount of time Viagra (Sildenafil) takes to work varies from person to person, but on average it takes between 20 minutes to one hour. Within a 4 to 6 hour period after taking the tablet an erection should occur in response to sexual stimulation. A man may find that Viagra takes longer to work if taken with a heavy meal.

Q: Does Viagra (Sildenafil) always work?

Viagra works for most men who take it. In studies, more than 4 out of every 5 men taking Viagra (Sildenafil) had better erections. Viagra (Sildenafil) works in most men no matter how long they have had ED, what caused it, or how old they are? And Viagra (Sildenafil) has been shown to work time and again in studies of thousands of patients. In those studies, patients had ED that ranged from mild to severe.

Q: Does Viagra (Sildenafil) have side effects?

When taken at the recommended dose, the possible **side effects of Viagra** (Sildenafil) are usually mild to moderate and last a short time. The most common side effects are a headache and facial flushing. Less common effects include indigestion, dizziness, stuffy nose and visual effects (a blue coloured tinge to vision and increased brightness of light or blurred vision).

Q: What should I tell my healthcare professional before he or she prescribes Viagra (Sildenafil)?

Before using Viagra (Sildenafil), tell your healthcare professional if you have or had heart problems, have low blood pressure or have high blood pressure that is not controlled, have had a stroke, have liver problems, have kidney problems or require dialysis, have ever had severe vision loss, have retinitis pigmentosa (a rare genetic eye disease), have stomach ulcers, have a bleeding problem, have a deformed penis shape or Peyronie's disease, have had an erection that lasted more than 4 hours, have blood cell problems such as sickle cell anemia, multiple myeloma, or leukemia, or take medicines called "alpha blockers."

Q: Can other medicines or food affect Viagra (Sildenafil)?

Viagra (Sildenafil) and certain other medicines can interact with each other. Tell your healthcare professional about all the medicines you take - including prescription and non-prescription medicines, vitamins, and herbal supplements.

Q: Who should not take Viagra (Sildenafil)?

You should not take Viagra (Sildenafil) if you take any medicines called "nitrates", use recreational drugs called "poppers", or have been told by your healthcare professional to not have sexual activity because of health problems. Viagra (Sildenafil) is only for men, not for women and children, and must be used only under a doctor's care

Q: Does Viagra (Sildenafil) prevent pregnancy or the spread of Sexually Transmitted Diseases?

No. Viagra (Sildenafil) neither serves as a male form of birth control nor does it protect a man or his partner from sexually transmitted diseases, including HIV.

Q: How do I get Viagra (Sildenafil)?

You must complete the **Maxpharm** online medical declaration and our doctor will prescribe Viagra if he feels it is the right treatment for your symptoms. Our pharmacy will dispense your medication and it will be delivered to your door.

DAPOXETINE HAS EFFECTIVE IMPOTENCE TREATMENT PROPERTIES

Today almost everyone is suffering from some medical problem or the other. Amongst various medical problems, sexual problems are the most painful since they can trigger psychological, personal and even social problems. Among men, premature ejaculation is a very common sexual dysfunction, affecting almost one-third of the global male population at some point in their lives. An occasional instance of premature ejaculation is not a cause for concern but if the problem recurs frequently then there exists a dysfunctional factor that demands immediate medical attention.

Dapoxetine is a new drug developed for effective management of premature ejaculation. Chemically it is similar to a family of antidepressants called SSRIs (Selective Serotonin Reuptake Inhibitors). It increases the level of serotonin in the central nervous system. Data indicates that men taking dapoxetine for treatment of premature ejaculation experienced marked improvements in sexual functions, ejaculatory control, sexual satisfaction and increases in IELT (Intravaginal Ejaculatory Latency Time). If Viagra has made sex possible for men suffering from impotence, this new drug aims to control premature ejaculation problems and make it last longer. Dapoxetine hydrochloride, a new cure for premature ejaculation could become Viagra reinvented for a vast majority of the male population. To know more about impotence treatment, order Viagra online and order Cialis online, then log on to www.maxpharm.com.

Recent advances in science have made it possible to conquer diseases and sexual dysfunction is no exception. Untreated or ignored male sexual dysfunction can become a profound problem with several critical consequences. Common male sexual dysfunction problems include impotency, erectile dysfunction and premature ejaculation. Viagra has provided a completely safe and effective cure to treat the problem of erectile dysfunction. Today, more and more doctors are actively prescribing this drug to treat cases of impotence. **Dapoxetine** designed on similar lines as Viagra aims to regulate the problem of premature ejaculation. With effectual cures available to treat erectile dysfunction and premature ejaculation, male impotence seem to be a thing of the past.

MaxPharm.com is committed to finding therapeutic solutions for illnesses such as hair loss, obesity, impotence and sexual dysfunction. Whether you want Viagra for impotence, Viagra for erectile dysfunction, **Dapoxetine for Premature Ejaculation**, propecia for hair loss or xenical for weight loss, **www.maxpharm.com** is your point of contact. Max Pharm provides several impotence treatments such as Viagra, Cialis and Dapoxetine. The company's online pharmacy provides only genuine, branded products. To buy Dapoxetine online, log on to MaxPharm.com and say good-bye to all your sexual dysfunction worries.

IMPOTENCE TREATMENT: EXPERTS HAVE AN ANSWER

Impotence, known as erectile dysfunction may be defined as a man's inability to produce an erection and thus effecting sexual relations. Impotence is an issue of major concern with an alarmingly large number of men today. Of late, there has been a surge of medical advancements in the field of impotence treatment. With the discovery of drugs that have the potential of creating and maintaining erections, life has begun to look brighter for men suffering from sexual dysfunction problems.

A large number of online pharmacies and clinics have mushroomed to cater to an ever-increasing demand for impotence drugs. These centers offer various kinds of impotence treatment and sexual therapies. www.maxpharm.com is UK's leading provider of impotence drugs and pills. MaxPharm is committed to offering men who suffer from erectile dysfunction the ability to procure necessary impotence treatment and therapy discreetly, confidentially, conveniently and at **NEW LOWER PRICES**. We provide all kinds of sexual and impotence treatment to cure erectile dysfunction, impotence, premature ejaculation and various other sexual dysfunction problems.

At MaxPharm, we provide various pills to treat male impotence. Our range of impotence drugs includes Viagra, Cialis, Levitra and Uprima. Viagra, Uprima and Levitra are oral medications used to treat erectile dysfunction. Viagra has completely revolutionised impotence treatment. It has made sex possible for men suffering from male impotence. By now everyone is well aware of the difference that impotence treatment Viagra can make to the lives of those suffering from erectile dysfunction. But unfortunately, due to government restrictions, the price of Viagra has remained high. Even those who can procure Viagra from their doctor find the cost of a private prescription and the time taken to get it, as major deterrents. At MaxPharm, you can order **Viagra online** in complete confidentiality and have the same delivered right across to your doorstep conveniently. Cialis also used to cure erectile dysfunction is an oral PDE5 inhibitor. Depending on a person's medical history, different drugs may be administered to treat the problem of male impotence.

Apart from various impotence treatments, we also offer sexual treatments. As part of sexual treatment to cure premature ejaculation, you can buy Dapoxetine doses. Dapoxetine hydrochloride data clearly indicates that men taking dapoxetine experienced significant improvements in sexual function, ejaculatory control as well as sexual satisfaction. Also known as Viagra reloaded, Dapoxetine aims to regulate premature ejaculation problems. To know more about **Impotence Treatment**, visit **www.maxpharm.com**.

IMPOTENCE TREATMENT WITH VIAGRA: SAFE & EFFECTIVE

Impotence also known as Erectile Dysfunction is a condition where a man is unable to sustain an erection, which in turn hampers sexual satisfaction. Impotence is a fairly common phenomenon that can occur at any age. But the condition is completely curable. Many men have undergone impotence treatment and have been able to return to healthier sexual lives. Today, several medicines are available to treat impotence. The most popular is impotence treatment Viagra.

In recent years, prescription medicines such as Viagra have played a major role in treating male impotence. Viagra is an oral prescription used to treat erectile dysfunction. It belongs to the class of phosphodiesterase (PDE) inhibitors. The drug is usually taken one hour before sexual activity and works by increasing blood flow along with sexual stimulation. In recent times, many doctors have begun prescribing Viagra for treating impotence. Not only has Viagra proved effective in treating many impotence cases, it is completely safe and free from harmful side effects. The drug has shown to work safely in men suffering from erectile dysfunction and other health concerns such as hypertension, high cholesterol, cardiac disease, diabetes, prostate problems and depression. Results indicate that Viagra can make tremendous difference to the lives of men suffering from erectile dysfunction. To know more about Viagra pill, visit www.maxpharm.com.

maxpharm.com provides men suffering from impotence the ability to order Viagra discreetly, confidentially, conveniently and affordably. To know more about impotence treatment Viagra and for a secure and effectual way to conquer the problem of impotence, log on to **www.maxpharm.com**.

ORDER VIAGRA ONLINE & ENJOY YOUR LIFE

Looking for an easy and convenient way to buy and order Viagra in complete confidentiality? GO ONLINE. Order Viagra online is an easy, quick and affordable way to procure Viagra pills, much convenient than rushing to a nearby pharmacy or consulting a doctor. Simply google “order Viagra online” and you will get many links from where you can conveniently buy your dose of the magical blue pills sitting right at home. Today, there is no dearth of online clinics, pharmacies and websites that accept online orders and deliver Viagra in different parts of the world. What’s more, you can even select your preferred mode of payment. Simple as it may sound, before you order Viagra online, it is better to be a little careful, as your decision will have far-reaching effects on your health and life.

Viagra has today become a generic name for various drugs used to treat sexual impotence in men. Different medication is available to treat various problems of erectile dysfunction and premature ejaculation. Popular amongst these are Cialis, Dapoxetine and Viagra. You will come across scores of websites on the Internet that supply Viagra but you must be wary, as all sources are not genuine and reliable. To buy Cialis, Viagra, Viagra pill and impotence treatment, click www.maxpharm.com, your reliable source for various impotence treatment.

Do not be rash in clicking for orders: all Cialis, Viagra and Dapoxetine pills available online are not genuine. Consuming fake or counterfeit drugs can pose serious health hazards. To avert such frightful possibilities, it is better to do a little research before placing the order. Check the credentials of the site from where you buy; skip sites that take orders without preliminary consultation and compare prices.

MaxPharm is your trusted source for genuine and branded pills. Before they accept your order, you need to fill a medical declaration form. This online form requires a few details like your medical and surgical history etc. A doctor will review your declaration and accordingly approve or decline your use of Viagra, Cialis or Dapoxetine.

There is no additional charge for this service and it is completely in your interest to undergo the consultation process. Once approved, just a few clicks here and there and you get your dose of Viagra, Cialis or Dapoxetine. MaxPharm helps you order authentic Viagra pill online, comfortably, conveniently, discreetly and affordably. To order Viagra online and enjoy your life, simply click www.maxpharm.com.

VIAGRA PILL & IMPOTENCE TREATMENT

Impotence, also known as erectile dysfunction is a man's inability to produce an erection and therefore have satisfying sexual relations. The condition can be caused due to various factors including disease, lifestyle factors, and hormonal or psychological causes or influence of certain drugs. Advances in science have offered many effective impotence treatments. Today, impotence is completely curable just like any other disease. Different types of impotence treatment include psychotherapy, drug therapy and surgery.

The most common and popular is drug therapy, which involves administering doses of special drugs to treat erectile dysfunction. Commonly used drugs include Cialis, Dapoxetine and Viagra pill. MaxPharm is UK's foremost provider of impotence drugs and treatments. We are committed to offering men who suffer from impotence the ability to procure necessary impotence treatment discreetly, conveniently and affordably. We have all kinds of drug therapy including treatment to cure erectile dysfunction, premature ejaculation and various other sexual dysfunction problems. For more information about Viagra pill and impotence treatment, log on to www.maxpharm.com.

At MaxPharm, our range of impotence drugs includes Cialis, Uprima, Levitra, Dapoxetine and Viagra pill. Thanks to **Viagra**, impotence is now no longer a curse. This wonder pill has offered a groundbreaking landmark in impotence treatment and made sex possible and satisfying for men suffering from erectile dysfunction. Today everyone is aware of the enormous difference that **Viagra pill** can make to the lives of those suffering from impotence. However, due to various government restrictions, the price of Viagra has remained high. To order Viagra easily and in complete confidentiality, click MaxPharm.com. Apart from Viagra, MaxPharm also provides other impotence medications. Cialis, Uprima and Levitra are oral medications to treat erectile dysfunction. Apart from impotence treatments, we at MaxPharm also offer sexual treatments. Dapoxetine as a part of sexual therapy can be effectively used to treat the problem of premature ejaculation. This drug is beneficial in improving sexual function and ejaculatory control.

Today being impotent is no longer considered synonymous with the loss of masculinity. It is just a medical problem that demands immediate therapeutic help, just like other common medical ailments like hypertension or diabetes etc. If left untreated or ignored, it can further endanger your health. Remember that you deserve a completely fulfilling life and make sure that you find the best way to enjoy your life to the hilt. For all sexual dysfunction worries, just click **www.maxpharm.com** and discover a whole new way of healthful and wholesome living.

VIAGRA PRICE: GET ANSWERS OF YOUR PRICE QUERIES

Viagra is an oral medication used to treat the problem of erectile dysfunction. Before the invention of Viagra, men suffering from sexual dysfunction had to silently suffer their ailment. Many were ashamed to even talk about it. With no cure available, many men suffered from grave social, psychological and inter-personal problems. Thanks to Viagra, it is now possible for such men to lead normal, healthy and sexually satisfying lives. The easiest way to buy Viagra is through the Internet. But a word of caution here: while surfing the Net you will come across many sites that claim to sell genuine Viagra. But remember all sources of procuring Viagra are not reliable.

Before ordering online, there are a few things that you must bear in mind. The FDA has no control over the Viagra price, so you cannot use the price as a determinant to decide whether you are being offered real or fake Viagra. Therefore, you need to be a little cautious while ordering your dose so that you can make an informed buying decision. Viagra pills are blue, diamond shaped pills with dosage strength written on the front and Pfizer written on the back and VGR. It is better to do a little online research before clicking for order. Price comparison, quality check and checking the credentials of the site are essential. To order genuine pills at the lower **Viagra price**, click www.maxpharm.com.

Sometimes, while surfing the Net, you may come across **Very Cheap Viagra Pills**. Never put your health at risk just for saving few pounds. In your eagerness to order, you may be inviting a host of health problems such as permanent penile damage, blindness and heart attack etc. If you order cheap Viagra, there are possibilities that you may be delivered fake pills or pills that are crushed or damaged.

MaxPharm is UK's leading provider of impotence treatment. By now everyone is aware of the huge difference that Viagra can make to the lives of those suffering from impotence. But due to various government restrictions, the Viagra price has remained phenomenally high, making it difficult for many men to get genuine Viagra.

MaxPharm provides you the ability to order impotence treatment Viagra discreetly, conveniently and affordably. Order now and avail of our special new lower Viagra price: buy 8 tablets and get 10; buy 12 and get 15 and buy 16 and get 20. To order Viagra online, visit at **www.maxpharm.com**.

UPDATES ON HAIR LOSS TREATMENT

WHY AM I LOSING HAIR AND WHAT TREATMENTS ARE AVAILABLE

WHAT IS CAUSING MY HAIR LOSS

Male pattern baldness (MPB) is an extremely common condition. Hair loss for many men may begin in the late teens or early 20s, and, by the age of 35 to 40, approximately 66% of men will experience some degree of hair loss. Typical on-start of male pattern baldness includes hair loss beginning in the frontal temple areas or over the vertex, (the crown of the head). It is now known that hair loss can be attributed to the action of dihydrotestosterone (DHT), a metabolite of testosterone. This metabolic conversion, catalyzed by the enzyme 5-alpha reductase, takes place in the scalp. The activity of 5-alpha reductase has been shown to adversely affect hair follicles and is directly related to increased hair loss.

SO WHAT TREATMENTS ARE AVAILABLE FOR HAIR LOSS

In Europe and the United States, there are two drugs approved by the relevant authorities for the treatment of male pattern baldness: MINOXIDIL which is a topical solution applied directly to the affected areas and **PROPECIA** which contains the active ingredient FINASTERIDE and is taken as a tablet once a day. Minoxidil 2% solution has been available for almost 10 years, initially only by prescription but now is available 'over the counter' from pharmacies. In November 1997, minoxidil 5% (Rogaine Extra Strength for Men) solution was approved for sale as an OTC item as well.

WHAT IS THE DIFFERENCE BETWEEN MINOXIDIL AND PROPECIA

MINOXIDIL

No one really understands how minoxidil works, but it is believed that the drug opens potassium channels, which could increase blood flow to the scalp or even stimulate hair follicles directly.

The 5% solution appears superior to the 2% solution, as measured by hair regrowth and overall hair density. Re-growth may occur as early as two months after starting treatment with the 5% solution and after four months with the 2% solution. After 48 weeks of treatment, users of the 5% solution displayed 46% greater overall hair regrowth than did users of the 2% solution. There is no significant difference between the two concentrations in terms of systemic side effects; however, cardiovascular--but minor and localized--side effects such as erythema, itchiness, and dryness are more frequent with the 5% solution.

PROPECIA

In contrast to minoxidil, the mechanism of action of propecia (finasteride) is well documented. The drug acts by blocking the enzyme 5-Alpha reductase. The reduced activity of 5-alpha reductase results in a 66% decrease of DHT concentration in the scalp. Clinical trials reported 83% of male patients with mild to moderate hair loss kept their hair or had grown more hair after one year of propecia treatment. Compared with placebo, the frequency of side effects associated with propecia appear minimal, although statistically significant. Reported side effects, caused by the drug's antiandrogenic properties, include difficulty achieving erection, a diminished desire for sex, and/or a decreased amount of semen. The 5-mg dosage of propecia carries a warning against exposure of women to semen from men who are taking the drug; the 1-mg dosage carries no such warning.

Avodart – The New Kid on the Block

Avodart is a new medicine made by GlaxoSmithKline containing the active ingredient

Dutasteride. Avodart (Dutasteride) was originally developed for treating prostate enlargement, a condition known as Benign Prostatic Hyperplasia (BPH) in men. In the US, it has passed Phase II testing for the treatment of hair loss in men but has formal approval as a prostate treatment medication only.

How Avodart (Dutasteride) Works

Avodart inhibits a hormone known as DHT (dihydrotestosterone). DHT is a hormone that appears to cause hair loss in most men. DHT is also the main cause of prostate enlargement in many men (also known as BPH - Benign Prostatic Hyperplasia). Avodart works by inhibiting the activities of two types of 5-alpha-reductase enzymes (propecia only inhibits one type of 5-alpha reductase) These enzymes are responsible in the body for converting Testosterone to Dihydrotestosterone(DHT). Avodart lowers DHT levels substantially.

Avodart (Dutasteride) - The Evidence

GlaxoSmithKline, the maker of Dutasteride, has completed Phase II trials for the FDA approval of Avodart (Dutasteride) as a treatment for hair loss. After six months of treatment, hair counts measured in a 1 inch diameter increased by about 96 hairs with 0.5mg of Avodart (Dutasteride). This is compared with an increase of only 72 hairs with the administration of 5mg Finasteride (Propecia).

The Difference Between Avodart and Propecia

Both medications work in a similar way, lowering DHT levels. However, Avodart inhibits the action of two types of 5-alpha-reductase enzymes (type I and type II). Propecia (Finasteride) only inhibits one type of the enzyme (type II). Avodart is more potent. Avodart has been shown to decrease levels of DHT by about 30% more than Propecia (Finasteride).

Avodart is available through our pharmacies

Our doctors do prescribe Avodart (Dutasteride) and our pharmacy despatches it within 24 hours. But for your own protection, everyone applying online must be screened by our doctors. This is a quick, confidential process but it can allow for the delivery of your medication within 24 hours.

UPDATES ON DIET PILLS SUCH AS XENICAL AND ACOMPLIA

Do weight loss or diet pills such as xenical and acomplia work?

Yes - but they work best as part of a combination of healthy eating, regular physical activity and the will power to keep at it to achieve weight loss. If our doctor approves one of the new weight loss medications like Xenical (Orlistat or tetrahydrolipstatin), Reductil (Sibutramine, called Meridia in the US) and Acomplia (Rimonabant) as right for you, then they can be highly effective as part of your weight loss regimen.

But remember - losing weight isn't easy and there is no magic pill, potion or prescription that can take the place of the hard work, you must do for yourself.

Do weight loss or diet pills have side effects?

Yes - and that is why it is important to be screened by a qualified doctor before you begin a weight loss or diet pill regimen.

ARE YOU OVER WEIGHT

Over the last 25 years, obesity rates have soared around the developed world. In the UK alone, over 20% of Britons are classified as obese (with a Body Mass Index over 30) with 75% classed as overweight (with a BMI between 25-30).

Can Medications Like Xenical Help?

Yes - but it depends on you. No diet pills work by themselves; they must be part of an integrated weight loss programme that includes exercise, sensible dieting and perhaps weight loss medication. Only your willpower can make that programme a success - and diet pills only work as part of a correctly screened and dispensed medical solution.

WHAT ARE THE LATEST WEIGHT LOSS TREATMENTS AVAILABLE

The latest approved diet drugs are **Xenical, Acomplia and Reductil**.

How Does Xenical Work?

Xenical (Orlistat) is a 'fat digester'. Its active ingredient is lipostatin.

Xenical (Orlistat) from Roche works by blocking 30% of the fat you consume from being absorbed, thereby reducing caloric intake. It is intended for use in conjunction with a physician-supervised reduced calorie diet. If you reduce your calorie intake, participate in regular physical activity such as walking, and use Xenical (Orlistat) you will start to see positive weight loss results.

Xenical (Orlistat) has been extensively studied. In clinical trials, almost twice as many patients who received Xenical (Orlistat), achieved an average weight loss of 10 percent or more of their body weight in one year, compared to those on diet alone. Xenical (Orlistat)

How does Xenical (Orlistat) work?

Xenical (Orlistat) blocks the action of the fat-digesting lipase enzymes in the intestine. This stops around 30 percent of the fat you've eaten from being absorbed. It simply passes through your digestive system and you lose weight as a result.

Who is Xenical (Orlistat) suitable for?

Only a qualified doctor can decide whether Xenical (Orlistat) is suitable for you, subject to your BMI and your general health. Health issues that may prevent the use of Xenical (Orlistat) include heart disease and Type 2 diabetes.

Do I still need to diet and exercise?

Yes! To avoid side effects, you should follow a reduced-calorie diet where no more than 30 per cent of calories come from fat. Taking more exercise is also recommended.

Is there any proof that Xenical (Orlistat) works?

Xenical (Orlistat) has been extensively studied. In clinical trials, almost twice as many patients who received Xenical, achieved an average weight loss of 10 per cent or more of their body weight in one year, compared to those on diet alone.

Are there any side effects to Xenical (Orlistat)?

Unabsorbed fat can cause loose stools and flatulence. Xenical also interferes with the absorption of the fat-soluble vitamins A, D, E, and K, so you might need to take supplements.

UPDATES ON ACOMPLIA

How Does Acomplia Work?

Acomplia (Rimonabant), from Aventis, is an anorectic anti-obesity drug. It is a CB1 cannabinoid receptor antagonist that works by reducing the pleasure response triggered in the brain by eating, thus causing reduction in appetite. Continuing tests show it may also be effective not only in controlling weight but in helping those who wish to quit smoking. Read more about Acomplia (Rimonabant)

Q. What is Acomplia (Rimonabant)?

Acomplia, is an appetite suppressant diet pill and smoking cessation drug.

How does Acomplia (Rimonabant) work?

It works by blocking CB1 receptor of the brain commonly called the 'pleasure centre' of the brain and interfering with the cycle of craving thus making hunger or smoking pangs more manageable. Its active ingredient Rimonabant, helps you lose weight, quit smoking and it also helps protect your heart.

What is the recommended dosage of Acomplia (Rimonabant)?

A. The usual recommended dose of Acomplia (Rimonabant) by doctors is 20mg daily before breakfast. Acomplia (Rimonabant) should be swallowed whole with a glass of water, and should not be chewed or crushed as it might contemplate side effects.

Who should not take Acomplia (Rimonabant)?

Acomplia (Rimonabant) should not be taken by expecting and lactating mothers. Also, since Acomplia (Rimonabant) is metabolized by the liver; patients with moderate hepatic impairment should consult their health care provider before using the drug.

What can you expect from Acomplia (Rimonabant)?

Acomplia (Rimonabant) works by reducing dependence on tobacco, suppressing appetite and restoring the balance in the system.

Is Acomplia (Rimonabant) right for you?

Only your doctor can determine if Acomplia is right for you. Therefore, it is recommended to consult your physician before using Acomplia so as to prevent unnecessary side-effects or possible drug interactions.

Is there any proof that Acomplia (Rimonabant) works?

Trials have shown that 33% of people using Acomplia lost 10% of body weight and kept their weight down for two years. This is a record, as no other diet drug has managed to sustain weight loss for so long. Further tests show that Acomplia (Rimonabant) users, besides losing up to 30lb in weight, have reduced risks for heart attack by improving levels of "good" cholesterol, lowering tri-glycerides and improving insulin sensitivity.

XENICAL WILL LET YOU LOOSE MORE WEIGHT IN LESS TIME

Nowadays, with more and more online clinics and pharmacies mushrooming, ordering and getting Viagra online is one of the easiest things. However, not all sources are safe and not all Viagra pills sold online are branded and genuine. Therefore, it is better to do a little research before placing your order. It is a matter of your health, so an informed buying decision is absolutely necessary.

First, you must be aware that Viagra pills should only be taken for the purpose for which they are intended, i.e. erectile dysfunction. Another important thing to know is that these blue pills are not safe for everyone. Unless your doctor advises you to take this pill, you may not experience efficacy and may instead experience unnecessary side effects. Once you have a doctor's recommendation, you can safely order Viagra online. There are several websites that sell Viagra online. www.maxpharm.com offers men suffering from erectile dysfunction the ability to order and get Viagra discreetly, confidentially and conveniently. The company also offers treatments such as xenical, xenical weight loss; propecia hair loss and many more.

You do not require a prescription to order Viagra online. All you have to do is complete a Medical Declaration Form, which requires a few details like your name, sex, height, weight, date of birth and medical and surgical information. This form is available on a secure server and you can rest assured about the safety of your confidential information. Besides, there is no extra charge for this service and it is included in the advertised price. In case you require any assistance/clarifications you can call or send a fax to MaxPharm. After you complete this consultation form and click submit, a doctor will review it. Once approved, the rest is easy: few clicks here and there and you get your own little blue pills.

MaxPharm offers an entire gamut of various medical treatments, such as impotence treatment, hair loss treatment and **Weight Loss Solutions**. The company provides an effective weight loss solution to many overweight people all around the world who wish to become slimmer and look good.

To **Buy Xenical** or Viagra online, confidentially and conveniently at affordable prices, visit **www.maxpharm.com** and say goodbye to troubling obesity and sexual dysfunction worries. Visit MaxPharm.com today and click your way to a whole new life.

XENICAL CAN ACCELERATE WEIGHT LOSS PROCESS

VIAGRA is a prescription medicine for treating erectile dysfunction. Viagra was first in the range of prescription drugs that has been shown to work effectively in most men with erectile dysfunction. The drug was approved by the FDA in 1998 and offered for sale the same year. Today, Viagra has become a generic name for drugs used to treat erectile dysfunction. Other drugs that operate by the same mechanism include vardenafil (Levitra) and tadalafil (Cialis).

Today, drugs to treat impotence and sexual dysfunction can be obtained online. Many online pharmacies and clinics have sprung up which deal in the supply of drugs to treat erectile dysfunction and cure impotence. Amongst such online providers, the name of MaxPharm.com is foremost. The company offers men suffering from erectile dysfunction the convenience of ordering pills discreetly, conveniently and affordably. At MaxPharm.com, we provide cure for illnesses that are non-life threatening. The range of our treatment plans includes xenical weight loss solution, hair loss control programmes and impotence treatment plans. To know more about our Xenical Weight Loss plan or Viagra Impotence Treatment, visit www.maxpharm.com.

We offer the entire assortment of pills used to treat impotence and sexual dysfunction, such as Viagra, Uprima, Cialis and Levitra. Manufactured by Pfizer, Viagra is an oral therapy to treat erectile dysfunction. Uprima is an oral medication also used for the same reason. Cialis, manufactured by Lilly ICOS LLC, is an oral PDE5 inhibitor used to treat erectile dysfunction. Produced by Bayer and GlaxoSmithKline, Levitra is another oral therapy used to cure male impotence. Depending on a person's medical history, different drugs may be administered to treat the problem of male impotence. Impotence treatments at Max Pharm primarily include Viagra, Cialis and Levitra. Apart from varied impotence treatments, we also offer sexual treatments, like administering Dapoxetine doses, Xenical Weight Loss and many other treatments.

Xenical is an oral prescription, a weight loss medication used to help people who are obese or overweight.

Xenical works in the intestines, preventing the fat that we eat from getting absorbed. This undigested fat subsequently gets eliminated in the bowel movements. Operating through this mechanism, **Xenical** helps in accelerating **Weight Loss** and maintaining the desired body weight. You can avail of Max Pharm treatments, by simply visiting the website www.maxpharm.com. So, log on today and discover an easy way to knock that unwanted fat off your body and get rid of troublesome sexual dysfunction worries.
